

Changing the Backup Method from iCloud to iTunes

On your iPad, iPhone or iPod Touch do the following.

1. Tap on **Settings**, then tap on **iCloud** in the left hand column.
2. In the left hand window now tap on **Storage & Backup**.
3. Now turn off **iCloud Backup** on this page.

On your Mac computer or PC with iTunes installed do the following.

1. Start iTunes.
2. Connect your device to the computer with the USB cable that is also used for charging.
3. Your device should now appear under Devices.
4. Right click on the device name.
5. Click on Back Up in the menu that appears.
6. The device will now be backed up.
7. To disconnect the device, click on the arrow to the right of the device name.

If at step 3 iTunes prompts you to set up your new device or restore from backup, choose to set up as a new device. This appears to happen if the device has never been connected to iTunes before. You should then be able to proceed with the remainder of the steps.
